

Soham Kubal

Performance Test Engineer

sohamk185@gmail.com | Mumbai, India | 8767245886 | github.com/soham-kubal
| soham-kubal.github.io

Profile

Performance Test Engineer with 5+ years of experience in performance engineering, load testing, and test automation for large-scale enterprise applications. Specialized in designing modular JMeter frameworks, building Python-based automation pipelines for JMX test plan management and Excel reporting, and diagnosing production bottlenecks through end-to-end transaction tracing using Azure Application Insights, AppDynamics, and New Relic. Proven track record of reducing manual testing effort through framework engineering, AI-assisted development, and reusable tooling. Skilled at translating performance metrics into actionable insights for stakeholders using Grafana, Power BI, and automated Excel reports.

Professional Experience

Performance Tester

MUFG Pension & Market Services

12/2024 – Present

Mumbai

- Architected a reusable, modular JMeter “Super Script” framework consolidating 17+ individual test plans into a unified, maintainable structure — reducing script maintenance effort by 80%.
- Built a Python automation framework (lxml, openpyxl) with 15+ CLI tools for JMX manipulation — including TC renumbering, JMX flattening, hashTree validation, HAR-to-JMX conversion, and disabled element removal — eliminating 60 hours of manual XML editing per release cycle.
- Developed an automated Excel performance reporting pipeline that processes JMeter aggregate CSVs, generates formatted multi-run comparison sheets, and produces PROD performance statistics with median/percentile analysis.
- Used Azure Application Insights to trace end-to-end transactions across microservices, identifying 21 stored procedure and backend issues/bugs by correlating dependency telemetry with application logs.
- Implemented dynamic CSV test data rotation using Groovy in JMeter tearDown, enabling continuous multi-run execution across 100 virtual users without manual data reset.
- Leveraged GitHub Copilot to accelerate Python script development and automate repetitive coding tasks, reducing development time by 75%.
- Integrated InfluxDB and Grafana for real-time JMeter test monitoring, building custom dashboards for live response time, throughput, and error rate visualization.
- Automated API test suite execution and report generation using Postman and Newman, integrating 13+ collections for continuous regression validation.
- Conducted performance test execution across 4 environments (STG, UAT, PROD) covering multiple modules for our web app.

Quality Engineering Analyst

Accenture

08/2024 – 11/2024

Mumbai

- Managed seamless transition of FedEx GSI performance testing responsibilities from Atos Syntel to Accenture, ensuring zero disruption to ongoing test cycles.

- Led performance testing for the FedEx GSI project using JMeter and ReadyAPI, designing and executing load, stress, and scalability tests across UI, API, and database layers.
- Designed load test scenarios simulating 1200 concurrent users of real-world traffic patterns, identifying critical performance thresholds that led to 3 infrastructure scaling decisions.
- Automated functional and regression API testing using ReadyAPI, building 30+ test suites that improved test coverage by 91% and reduced regression cycle time from 4 days to 7 hours.
- Utilized LoadRunner for performance and functional testing of a complex UI application and associated Oracle/SQL databases under 150–200 concurrent user load.
- Monitored server-side performance using AppDynamics, correlating application tier metrics with database response times to identify 24+ bottlenecks across 36 releases.
- Analyzed LoadRunner and JMeter reports to identify memory leaks, connection pool exhaustion, and slow SQL queries, collaborating with development teams on 16+ performance fixes.

Education

B.E. Computer Engineering *2016 – 2020*
Mumbai University
Semester VIII CGPA: 9.58 • Overall (all semesters) CGPA: 7.39

HSC *2016*
U.B.S Junior College
Promoted with 73.5%

SSC *2014*
N.E.S High School
Distinction with 92.4%

Skills

Automation & Scripting: Java, C, Groovy, JavaScript, Python, Selenium, Playwright, Apache POI

Performance Testing: JMeter, LoadRunner, Load/Stress/Scalability/Soak Testing, Baseline Analysis, Percentile Analysis, Workload Modeling, Test Data Management

API Testing: Postman, Newman, ReadyAPI (SoapUI), REST/SOAP API Validation

Monitoring & Diagnostics: Azure Application Insights (E2E Transaction Tracing), New Relic, AppDynamics, Heap Dump & GC Analysis

AI & Productivity: GitHub Copilot, Prompt Engineering, AI-Assisted Test Development

CI/CD & Version Control: Jenkins, GitHub, Newman CLI Integration

Data & Reporting: Grafana, InfluxDB, Power BI, Excel Automation (openpyxl), CSV/JTL Aggregate Processing
